

IFS HPC

The industry's most stringent and difficult to obtain certification to date. What guarantees this certificate? The aim of this standard is to ensure that household and personal care products are quality products, safe and compliant with the strict rules of the Community market.

BIODEGRADABILITY AND COMPOSTABILITY

NATURaLL®, which bases its company philosophy on respect for the environment, wanted to certify its products following the UNI EN 13432-200 standard, through "Innovhub stazioni sperimentali per l'industria" - certified laboratory ACCREDIA.

The test report N ° RTP SSS 170070, obtained from the positive result of the certification, states that the NATURaLL® products are 100% biodegradable and 100% compostable.

FOOD CONTACT

The EC Regulation 1935/2004 provides: any material or object, intended to be put in contact with food products, must follow specific measures before being placed on the market.

For this reason, NATURaLL®, focusing on the satisfaction of its client, has adopted the aforementioned regulation by obtaining the following certificates: No. 0351LP / 2016 of 24/11/2016 and No. 0352LP / 2016 of 24/11/2016.

ICEA

ICEA certification, for textiles made of natural fibers coming from organic farming, is the most widely used in the bio field, as it offers the consumer considerable guarantees in terms of reliability and naturalness. The certification guarantees: a product without substances potentially harmful to man or the environment and a product subject to strict controls, able to guarantee the use of safe and natural formulations.

The aforementioned certification is in accordance with the requirements set by the Global Organic Textile Standard (GOTS) and the Organic Content Standard (OCS).
